

Remote Tacho Download

Automatize the process to download the tachograph files remotely and comply with the regulations more easily.

Fleet owners are required by local regulations to store tachograph data and to check for compliance against drivers' hours regulations. With our remote tachograph download solution, you can automatize the process to download your vehicles' and drivers' tachograph files. The obligation to regularly download and archive DDD files will no longer be time-consuming and constraining. The process will be entirely automatic, and you will not need to immobilize your vehicles.

How does the Remote Download of Tachograph data work?

Hosted at AddSecure, your company card will be connected to the tachograph remotely via a card reader and our onboard computer. Once the handshake is done and

the identification has been verified, the on-board computer will retrieve the data and send them to our server. The files will be downloaded automatically and regularly.

The files are sent to our server every 24 hours. The transfer is triggered by the onboard computer detecting a driver card in the tachograph which has not been copied for 24 hours. The collected files can be sent to a local storage facility (FTP), but you can also use our cloud for secure storage and analysis of the files (option). There are also integration possibilities for external storage and analysis services.

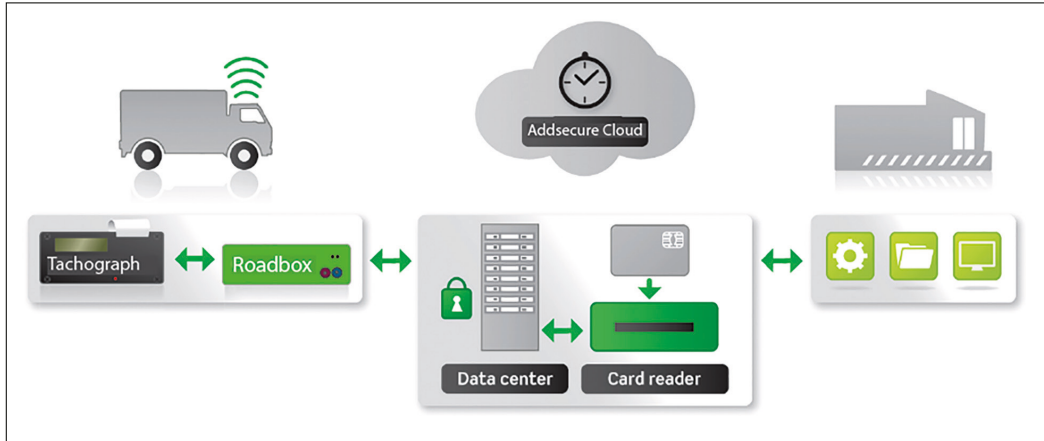

In our office application, the progress can be monitored in three ways:

- Unregistered maps: Displays all unregistered driver cards
- Vehicle download status: indicates whether RTD is activated and the last files downloaded
- Driver card download status: displays user information and last downloaded files

Follow up the progression of tachograph files downloads

In our web application, you can monitor the progress of the downloading process for vehicles and drivers and identify unmapped cards.

The remote tachograph download workflow.

Key features

- Download data from the tachograph remotely and on the run
- Company card hosted by AddSecure for a 24 h availability
- Ensure that each file is downloaded at the right time through our monitoring dashboard
- Easily comply with the regulations

Efficient monitoring of download processes through our office application.

Benefits

- Hassle-free download and archiving of the tachograph files remotely and automatically
- No time-consuming manual copying of legal files
- Avoid vehicle immobilization
- Identify vehicles that are missing
- Simplify your employees' work with one click or single-view information
- Rely on AddSecure for the hosting of your company card

Required equipment*

- AddSecure Roadbox: an on-board computer is required for this service
- Tachograph compatible with remote copying/downloading (This requires a communicating tachograph. Contact your sales manager for more information.)
- Company card hosted at AddSecure

* For more information, please refer to the product data sheet.
